

New on schooldesigner.com

All Designer Product pages now have a way for users to request product information from our Industry Partners.

Product Profile:

Stacked configurations of rectangular and arch-top awning windows allow an abundance of natural light into the interior and serve to break up the building's horizontal, linear appearance. In addition, Tan aluminum cladding provides a low-maintenance exterior. To minimize janitorial maintenance and safety concerns, the design team specified windows with between-the-glass commercial blinds. The tilt-only window treatments have no roomside cords, and are protected from dust, damage and little hands. As an added benefit, the windows expand the "tackable" wall space in the classroom for displaying student artwork and other classroom decorations

Bottom Right
With Blinds between the panes of glass, the inside is free from cords and other visual obstructions. Simple shade controls allow for adjustment to control natural light while allowing the unit to be opened or closed providing natural ventilation. The windows also become useful wall space for displaying student work
